Knowledge and skills

Graduates have knowledge of the technology of building and the management of the process. They understand the economic aspects of a construction project and the legal framework within which the industry operates. They also develop a range of transferable skills including team working, problem solving, decision making, numeracy and IT, which are valuable in all workplaces.

Professional accreditation

Accredited by the Chartered Institute of Building and the Association of Building Engineers.

Career opportunities

Some of the employment opportunities include project management, site management, construction estimation, and building control surveying. The skills and knowledge also relate to other types of work such as quantity surveying and facilities management. The industry has some large employers but is very diverse, including contractors, producers of products and materials, consultants and local government.
